

Maximising Opportunities Overcoming Challenges

Internal Medicine

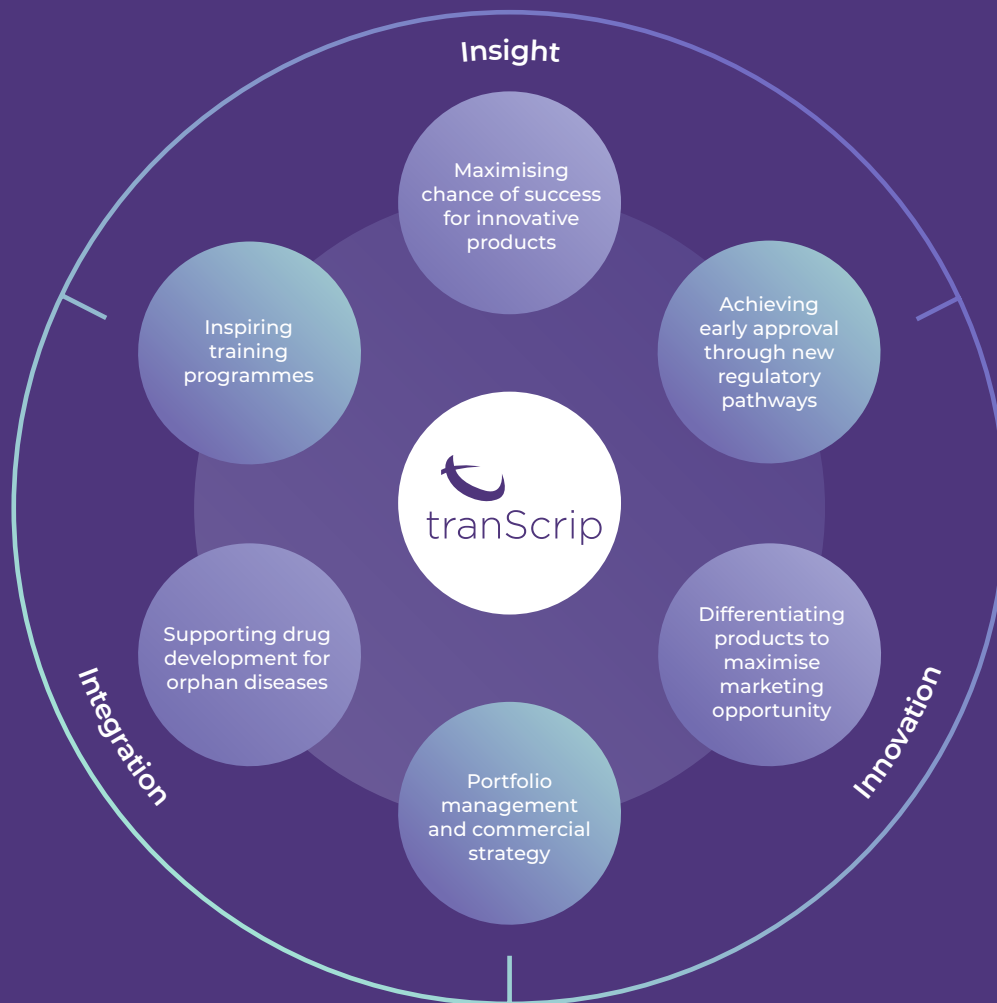

Drug development in many areas of internal medicine is thriving, with companies expanding their pipelines in cardiometabolic, auto-immune or kidney diseases. Various rare but devastating conditions are also the focus of the industry, with a number of orphan drugs rapidly progressing through clinical development. tranScrip's expertise covers small molecules as well as monoclonal antibodies, cell therapy, antisense oligonucleotides and gene therapy. We are helping our clients seize opportunities and meet their development goals by challenging the current clinical and regulatory paradigms.

Diverse Programmes Effective Execution

A snapshot of our recent projects

Insightful Collaborations Seamless Integration

What we will do

When there is a problem or gap, we will become your long-term partner and create a way together to resolve the issue.

Why are we so confident?

Working as long-term partners, our internal medicine teams integrate seamlessly with our clients. We provide effective support by delivering strategic insights and innovative approaches to all aspects of drug development, from translational science through to registration and medical affairs, worldwide.

tranScrip has a proven track record of achievements that include:

- Designing and delivering large, complex, cross-functional internal medicine programmes
- Serving as the drug development organisation for small biotech companies
- Interpreting 'difficult' outcomes in clinical trials and steering discussions with the regulatory authorities
- Fielding multi-functional submission teams to author and deliver MAAs and NDAs
- Providing management and oversight for all drug safety needs
- Designing and delivering tailored training programmes for product launches
